# Zara™ for z/OS V3.0.0

---

## LMS

Sometimes ATLS are controlled by Library Management System (LMS) software. Support for Zara is available from LMS version 3.1.

The MEM.CNTL member ZARA2SAL contains JCL to assemble and link a ZARA02SX exit that interfaces with LMS. Specify TDBSYS=ZARA on LMSUTIL commands SCRATCH, OFFSITE, and DYNAMIC to ensure Zara interfaces are used.

LMS supports subpooling as provided by Zara. You must ensure the subpool names are used consistently and that they correspond to the same ranges of volumes on LMS and Zara.
